

A - closet

A can of spraypaint, a solid metal box, assorted screws and nails, spare cables with USB slots, chunks of plastic, a hammer, a screwdriver, duct tape

A sprite is shimmering faintly in the corner, but not moving

B - a refinery

3 prospectors operating a large refinery on the wall. rocks come in from another room on a belt and are dropped into a machine, and chunks of shiny heavy metal come out of it and head into another room, while drops of rare metal are collected in a pan in the center. Periodically a delivery bot will empty the pan of rare metal to deliver it to other rooms. The prospectors have no faces, but a few USB sockets near where their necks would be.

security bots guarding a tangle of electrified chains along one wall.

C - worker storage

dozens of sleeping miners plugged into the walls.

A cluster of sprites hovering upon each of the bots, rhythmic and bright.

D - shipping

a bot carrying trays of rare metal periodically comes in and dumps into a cart, while conveyor belts bring in shiny chunks and cooled byproduct, dropping into respective carts. The carts carry the materials into an airlock along the wall. A huge window along that wall shows a bay outside, staging shipments to be transported to earth.

Along the other wall, security bots guarding a tangle of electrified chains

E - metal plates

Chunks of shiny metal come in on a belt from another room and are dropped into a machine, processing them into plates. A transport bot grabs them from the output and lines up the stock of plates against a wall. there are already hundreds.

A sprite is shimmering faintly in the corner, but not moving.

F - administrative storage

spare computer parts, spare batteries, a partially scrapped miner, a USB keyboard, a hammer, a screwdriver

sprites hover around the computer parts.

G - trash

piles of hot sludge pour in from several channels along the walls, flows toward a drain in the center but has begun to clog up as it cools and hardens. A sanitation bot with a blowtorch is attempting to keep the drain area hot enough for the byproduct to continue flowing through the drain.

H - assembly line

delivery bots bring trays of raremetal bits in and drop them onto a slow conveyor. a row of assembly bots are step by step building them into computer parts. At the far end of the conveyor is a repository of two different types of chips.

Along a wall, security bots guarding a tangle of electrified chains.

ROCKS

You open a door to a bed of rocks. You can see shiny and rare veins. The rare veins refract with the same glint as the sprites, without the shimmering or movement.
